Your one-click answer to file security and piece of mind

Finally, a simple and economical solution to your computer file security questions has come along. *cPcP FileBakker*, fully written and developed by Custom PC Programming, is an easy-to-use, one-click computer utility program which makes a backup copy of selected documents and data files and writes them to a CD, memory stick, floppy disk, or auxiliary drive.

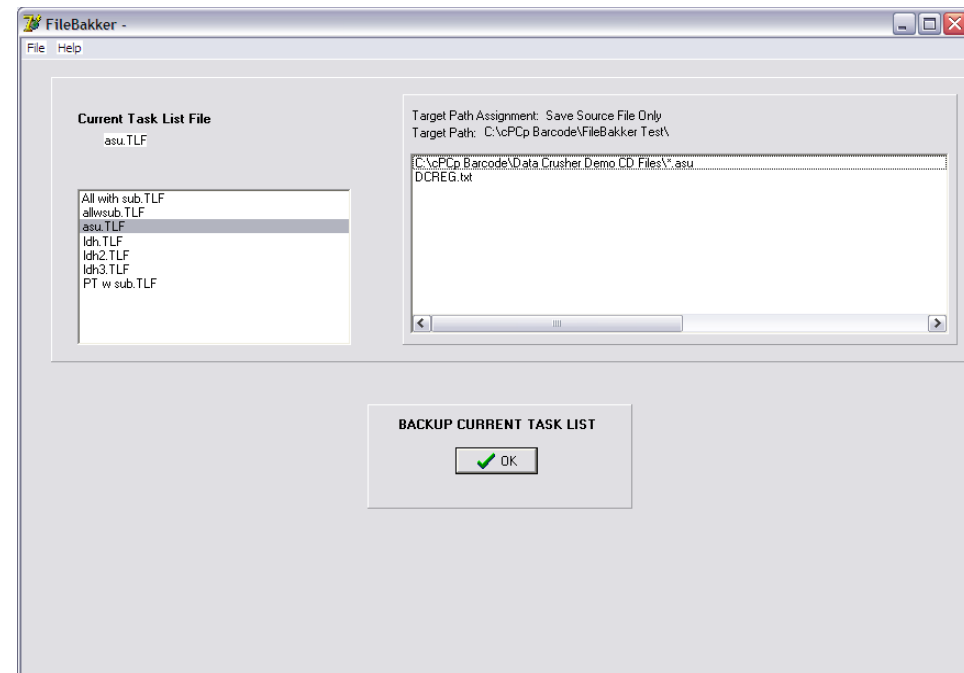

Like countless other computer users, you probably have experienced the panic associated with the discovery of a crashed drive or a stolen laptop. While it is generally understood that a periodic file backup routine would greatly diminish the effects of the crisis, such a manual process is viewed as cumbersome, time-consuming, and inconvenient. Because the discipline required to steadfastly maintain such a regimen is seldom developed before its too late, the result in many cases is catastrophic and irretrievable data loss.

To address the consequences of lost data and provide peace of mind to the everyday computer user, *cPcP FileBakker* was created so hassle-free and inexpensive that even the most novice of users can learn to use and afford to buy a copy for his or her computer. Its instant execution from a desktop shortcut makes the data backup process effortless and immediate, providing an easy and user-friendly file backup system that everyone will master and faithfully utilize.

- Easy setup of Task File List
- Identify files to save by file name, type, or folder location
- Create from 1 to an unlimited number of Task Lists
- Desktop shortcuts provide one button click capability to execute file backup
